

HOOK

3 US SaaS Ops Automations to Wire *This Quarter*

Your US SaaS growth demands efficient internal operations, not manual busywork. High-performing Series A teams are leveraging custom automation to scale faster without adding headcount. I build production-ready AI agents and integrations that remove these bottlenecks and save significant time across your GTM and ops teams.

1 Eliminate manual data entry errors

2 Free up high-value employee time

3 Boost team productivity and ROI

01

Automate Sales Intelligence for *Faster Deals*

Manual prospect research before calls eats into valuable SDR time, reducing their selling capacity. I can build automations that pull key data points and deliver actionable insights directly to your reps, eliminating busywork and sharpening discovery. This ensures your sales team is always prepared before their 9 AM ET standup.

1 Calendly webhook triggers prospect data fetch

2 Apollo.io enrichment + public site scraping

3 Gemini API summarizes key talking points to Slack

02

Streamline Client Onboarding with *AI* Efficiency

New client onboarding is critical but often manual, leading to delays and errors in provisioning and communication. I've built systems that automate every step from DocuSign contract signing to tenant provisioning, ensuring a smooth, branded experience for your US SaaS customers. This reduces average onboarding time from 45 minutes to under 5.

1 DocuSign Connect webhook fires on signed contract

2 Python FastAPI extracts contract details (seats, SLA)

3 Auto-provision tenant in PostgreSQL + update HubSpot

03

Improve Support Response Times with *AI Triage*

Your support team gets bombarded with tickets, some urgent, some routine, leading to delayed responses. A custom AI agent can triage incoming queries, route them to the right specialist, and even draft initial responses, significantly cutting down on first-response times for your US SaaS customers. This ensures critical issues are handled promptly.

1 Intercom/Zendesk webhooks for new tickets

2 Anthropic API classifies urgency + topic

3 Assigns to agent via Slack + drafts initial reply

04

Automate Financial Alerts & *Reconciliation*

Keep your finance and ops teams aligned with real-time financial data without manual checks, which are prone to errors. I can build automations that monitor Stripe for specific events, reconcile subscription changes, or alert stakeholders to critical payment issues before they become larger problems. This helps maintain financial accuracy and compliance.

1 Stripe webhooks for subscriptions, failed payments

2 Node.js worker updates HubSpot/internal CRM

3 Real-time alerts to finance in Slack/email

Want this on *your* stack?

Comment AUTO or DM AUTO. I will suggest 3 automations for your CRM + chat + project tools. Stop patching manual processes with more headcount. Let's build custom automations that give you a competitive edge in the US SaaS market.

1 Free 15-min audit

2 Fixed-price builds
