

HOOK

Stop Wasting *15 Hours/Week* on SDR Research

Discovery calls are critical, but manual prospect research drains SDRs, leading to inconsistent briefs and missed opportunities. Imagine a system that delivers key insights on demand.

1 Eliminate manual data entry

2 Increase rep confidence

3 Boost demo-to-close rates

01

Trigger on *Calendly* Booking

The automation begins the moment a prospect books a meeting via Calendly. A webhook fires, sending essential booking data like prospect email and company name to a custom Node.js backend.

1 Calendly webhook for new events

2 Node.js server acts as event listener

3 Captures lead contact and company info

02

Enrich with *Apollo & Web Scrape*

Using the company domain, I connect to Apollo's API for firmographic data and then deploy a custom web scraper to gather public information from the company website. This builds a rich profile.

1 Apollo.io API for company details

2 Custom Node.js scraper for website content

3 Consolidates data into a single object

03

AI Drafts *Talking Points*

The collected data is fed into a Gemini API prompt, custom-tuned to generate three personalized talking points and likely pain points specific to that prospect's industry and company profile. This is where the real intelligence shines.

1 Gemini API for summarization

2 Custom prompt engineering for sales focus

3 Generates relevant talking and pain points

04

Deliver to *Slack + HubSpot*

The AI-generated brief is then sent as a structured message to the assigned SDR's Slack channel, 10 minutes before the call. Key data is also updated in HubSpot, ensuring a full audit trail and alignment with existing CRM workflows.

1 Slack API for real-time brief delivery

2 HubSpot API for CRM data update

3 Admin dashboard to refine AI prompts

Want this on *your* stack?

Comment AUTO or DM AUTO. I will suggest 3 automations for your CRM + chat + project tools.

1 Free 15-min audit

2 Fixed-price builds
