

## HOOK

# Stop Losing Deals to *Missed* Follow-Ups

Your US sales and CS teams spend too much time manually checking HubSpot for urgent tasks. Imagine getting critical reminders pushed directly to Slack.

1 Focus on high-value activities

2 Never miss a deadline

3 Boost rep productivity

01

# Set Up HubSpot Task *Webhooks*

Start by configuring a HubSpot workflow to fire a webhook when a high-priority task is created or updated. Filter for tasks related to deals over a certain value or specific customer tiers.

1 HubSpot Workflow automation

2 Task 'Priority' property

3 Send custom webhook data

02

## Build a Node.js *Endpoint*

Create a simple Node.js endpoint to listen for these incoming HubSpot webhooks. This is your central processing unit for filtering and formatting the task data.

1 Express.js webhook listener

2 Secure API key validation

3 Parse HubSpot JSON payload

03

## Target *Relevant* Reminders

Inside your Node.js app, filter tasks by priority, associated deal owner, or even the task subject. Format the message clearly, including direct links back to the HubSpot task and associated deal.

1 Filter by task assignee

2 Link to HubSpot task URL

3 Condense key details

04

## Slack *DM* or Channel Alerts

Use the Slack API to send a direct message to the task owner or post to a team-specific channel. This ensures the right person sees the alert immediately, before their 9 AM ET standup.

1 Slack Bot User OAuth token

2 Post to private DM

3 Use Slack Blocks for rich message

# Want this on *your* stack?

Comment AUTO or DM AUTO. I will suggest 3 automations for your CRM + chat + project tools.

1 Free 15-min audit

2 Fixed-price builds
