

HOOK

Is your *Stripe* dunning costing you revenue?

Generic email sequences from Stripe often miss the mark, leading to avoidable churn. US SaaS companies need more personalized, integrated recovery strategies.

1 High-value customer churn

2 AE time wasted on chasing

3 Inconsistent follow-up

01

The ***problem*** with generic dunning

Standard Stripe emails lack context and personalization. They don't account for customer history, contract value, or usage patterns, making them easy to ignore.

1 Low open rates

2 Irrelevant messaging

3 Missed recovery opportunities

02

AI-drafted recovery messages

I integrate Gemini or OpenRouter APIs to analyze customer data (from HubSpot, Salesforce) and draft highly personalized, empathetic emails. These feel human, not automated.

1 Uses customer CRM data

2 Adapts tone and urgency

3 Higher engagement rates

03

AE Slack alerts for high-value

For accounts over a certain threshold, a custom Node.js webhook triggers a Slack alert for the assigned AE. This happens before their 9 AM ET standup, giving them time to prepare.

1 Real-time AE notification

2 Prioritizes high-value accounts

3 Enables proactive outreach

04

End-to-end audit & metrics

A custom dashboard built with Next.js and PostgreSQL tracks every interaction, recovery attempt, and success rate. This provides a clear audit trail for SOC 2 compliance.

1 Full recovery visibility

2 Compliance-ready logging

3 ROI tracking

Want this on *your* stack?

Comment AUTO or DM AUTO. I will suggest 3 automations for your CRM + chat + project tools.

1 Free 15-min audit

2 Fixed-price builds
