

HOOK

Stop *Drowning* in Manual Support Triage

For US SaaS, every minute counts when a customer needs help. Manual routing of Intercom tickets to Notion or Jira isn't just slow; it's a bottleneck hurting your first response times and customer loyalty.

1 Long wait times for critical issues

2 Error-prone manual data entry

3 Overwhelmed support agents

01

Intercom to Notion AI *Auto-Triage*

I build agents that listen for new Intercom conversations, use AI to understand the core issue, and then create a detailed, categorized task in Notion. This ensures tickets land with the right team, with context, instantly.

1 Intercom webhooks trigger AI

2 Gemini API summarizes ticket intent

3 Notion API creates categorized tasks

02

AI-Powered *Knowledge Base* Retrieval

Instead of agents searching endlessly, connect your internal docs (Confluence, Google Drive) to an AI agent. It can instantly pull relevant articles or FAQs based on ticket context, ready for agent review or even auto-response drafting.

1 Pinecone vector DB stores docs

2 OpenAI/Anthropic for semantic search

3 Slack integration for quick answers

03

Proactive Issue *Escalation* & Alerts

Monitor specific keywords or sentiment in Intercom chats. If an issue is critical or a customer is highly frustrated, the AI can immediately alert a manager in Slack or PagerDuty, even creating a high-priority task in Asana.

1 Real-time sentiment analysis

2 Triggers based on custom keywords

3 Slack/Asana alerts for urgent cases

04

Automated *Feedback* Loops to Product

Regularly analyze categorized support tickets to identify common pain points or feature requests. An AI can summarize these trends and automatically push actionable insights into a product team's Trello or Jira board.

1 Weekly/monthly trend analysis

2 AI summarizes recurring issues

3 Jira/Trello for product backlog

Want this on *your* stack?

Comment AUTO or DM AUTO. I will suggest 3 automations for your CRM + chat + project tools.

1 Free 15-min audit

2 Fixed-price builds
