

HOOK

Stop drowning in *support tickets*

Here are the five custom automations US support teams ask me to build most to scale operations.

01

Notion-backed *auto-drafting*

AI reads incoming tickets, fetches the correct Notion help doc, and drafts a precise reply inside Intercom for quick agent review.

02

VIP customer *escalation*

Check Stripe metrics and auto-route accounts with high MRR to a dedicated Slack channel for immediate team focus.

03

Clean *bug triaging*

Convert user complaints into formatted Jira tickets with browser error logs attached, keeping engineering happy.

04

Auto-updating *audit trails*

Keep a strict, tamper-proof record of data access and customer interactions in your database to pass SOC 2 audits with ease.

Want this on *your* stack?

Comment AUTO or DM your stack to see how we can speed up your customer response pipeline.

Comment *AUTO* to start.
