

TIMELINE

How we ship mobile apps in *8 weeks*

Stop waiting months for a working build. Here is our exact, battle-tested roadmap for rapid launch.

01

Interactive UI/UX design in week 1

We skip static mockups and design interactive clickable prototypes directly in Figma so you feel the flow immediately.

02

Agile cross-platform engineering sprints

Our developers write clean Flutter or React Native code, ensuring a single codebase serves both iOS and Android perfectly.

03

Rigorous automated and manual QA testing

We run extensive integration and device testing to eliminate crashes, slow load times, and battery drain before launch.

04

Smooth App Store deployment and handover

We handle the entire submission process for Apple App Store and Google Play, giving you full ownership of all clean code.

Ready to *build* your app?

Comment BUILD or DM us to receive a free custom approach and timeline within one business day.
