

MVP PLAYBOOK

How to ship an *MVP* in 90 days

A proven framework used by our team to launch fast and scale clean.

01

Identify the *core value* loop

Isolate the single feature your users cannot live without. Strip away the secondary features and save them for version two.

02

Design for *immediate* clarity

First-time users should understand how to use your app in under five seconds. Keep onboarding forms to a single screen.

03

Build with *scalable* tech stacks

Use reliable frameworks like React, Node, or Flutter. Avoid over-engineering your backend database on day one.

04

Launch and collect *real* feedback

Deploy your product to actual users. Monitor their behavior patterns and optimize based on quantitative data.

Ready to *build*?

Comment BUILD or DM us your idea. Our team will reply with a rough approach and timeline within one business day.

Comment *BUILD* to start.
